RMT Reliability to Showcase Advanced Rotating Equipment Solutions at World Utilities Congress 2025

Abu Dhabi, UAE – 12th April 2025 – RMT Reliability, a trusted name in condition monitoring and rotating equipment expert services, is proud to announce its participation in the World Utilities Congress 2025, taking place in Abu Dhabi from 27th until 29th of May 2025. The company will exhibit its latest innovations in predictive maintenance, wireless monitoring, and engineering diagnostics for critical industries.

With a strong track record in supporting sectors such as power and desalination, water and wastewater, district cooling and oil & gas, RMT Reliability offers tailored solutions that reduce downtime, extend asset life, and optimize operational efficiency.

Visitors to the RMT stand will experience:

- **Live demos of the Kappa X wireless vibration sensors along with its advance Analytix software** by Sensoteq
- **A showcase of FEA and Experimental Modal Analysis** capabilities for resonance and fault detection
- **High-performance vibration hardware** from world leader in the design and manufacture of industrial accelerometers, piezo velocity transducers, 4-20mA vibration sensors, and proximity probes as well as all related mounting hardware, cabling, and junction boxes, CTC
- **Specialist sealing components, rubber, plastic and composite technology** from Lanson Polymers

“Our participation in the World Utilities Congress highlights our commitment to helping utilities and critical industries embrace smarter maintenance strategies,” said William Maxwell, founder of RMT Reliability. “We look forward to connecting with industry leaders and demonstrating how data-driven reliability can transform operations.”

As a regional leader in predictive maintenance and rotating equipment engineering, RMT Reliability invites attendees to explore how its expertise can improve plant availability and safety—starting with a conversation at the Congress.
